Every Paraclipse® system is packed with features.

**FEATURES**

**Paraclipse Unit**

**BENEFITS**

- Highly effective combination of special UV light, attractants and trapping surface
- The trapping system is environmentally friendly (designed for use in food handling areas and meets applicable guidelines)
- Sanitary
- Unique Paralamp® placement (in-line)
- Ultraviolet Lamp Booster Reflector
- Easy to maintain, easy to clean
- End of cartridge alert
- Fresh sticky surface and sex attractants are released continuously
- Research-proven, flying insect-attracting UV light device
- Exclusive automatic advance cartridge trapping system
- Specially engineered reflective white plastic and white UV light device
- Insecticide-free
design
- Decorative and Stylish unit can be placed in public areas
- Specially engineered flying insect commercial/industrial use attractants
- Integrated Post Management (PM) design
- UL Listed
- CE Compliant
- Indoor Use
- Outdoor Use

**CAPTURE CARTRIDGE**

- Great flying insects to trapping surface (keeps traps clean)
- No hazard from chemical pesticides and no scattered insect parts
- Unit helps keep your home or establishment safe and free from flies carrying harmful such as disease-carrying viruses
- Mosquitoes carry the West Nile virus, which can trigger fever, meningitis and even death
- Flies and other pesky insects are simple creatures. They live to eat and reproduce.
- Every instinct makes it irresistible.

**Our amazing CAPTURE CARTRIDGE**

The stationary trapping surface of standard glue boards will become ineffective after a few days. The exposed glue dries out and gets covered with dust, grease and insects.

Paraclipse has smartly solved all those problems with our Capture Cartridge. The cartridge auto-advances, so a fresh adhesive and attracting surface is always presented. As insects become trapped, they are rolled into the receiving end of the cartridge, making disposal safe and clean.

**Clean and Sanitary**

The Paraclipse Insect Control System is the safest and most sanitary way to trap flies and other insects. Research has shown that when insects are electrocuted, bug zappers can spread a mist containing insect parts up to about 7 feet (2.1 m) from the device. The air around the bug zapper can become contaminated by bacteria and viruses that can be inhaled by, or settle on the food of people in the immediate vicinity. Glue boards will become ineffective after a few days.

**Why the Paraclipse Insect Control System is so effective.**

Flies and other pesky insects are simple creatures. They live to eat and reproduce. Paraclipse uses these basic instincts to lure flies into the most advanced trap ever devised. First, our fly traps use Ultraviolet light and reflectors to draw the flies to the unit. Once at the unit, they are attracted to the trapping surface by food scents and sex pheromones blended into the capture medium. As a final attractant, our trapping surface displays printed fly images. These act as decoys, triggering the instinctive social behavior of feeding flies. The result is a trap that is irresistible to every fly in the room.

Paraclipse has smartly solved all those problems with our Capture Cartridge. The cartridge auto-advances, so a fresh adhesive and attractant surface is always presented. As insects become trapped, they are rolled into the receiving end of the cartridge, making disposal safe and clean.

Clean and Sanitary

The Paraclipse Insect Control System is the safest and most sanitary way to trap flies and other insects. Research has shown that when insects are electrocuted, bug zappers can spread a mist containing insect parts up to about 7 feet (2.1 m) from the device. The air around the bug zapper can become contaminated by bacteria and viruses that can be inhaled by, or settle on the food of people in the immediate vicinity. Glue boards become carpeted with insects, and then must be handled. Chemical fly control systems are toxic, and always pose a risk of contamination.

The Paraclipse system avoids the problems of other control methods, while offering an effective insect control system that is powerfully attracting and better designed for public spaces.
Insect Control that's as attractive to your eyes as it is to the flies.

For inconspicuous fly control in public areas, our decorative systems are powerful units that work hard and look great:

**INSECT INN ULTRA I & II™**

Customers will see a beautiful sconce and soft light. They’ll never realize it is actually a highly effective commercial fly control system. In bars and other areas where fruit is cut or stored, the Insect Inn Ultra I & II provide effective control against swarming gnats and fruit flies.

The patented auto-advance cartridge lasts 60 days and will capture thousands of flies. Available in one-or-two lamp models, this wall mounted unit meets all USDA and FDA guidelines.

Big commercial, industrial and open outdoor spaces call for insect control that is up to the challenge of eliminating flies and mosquitoes on a large scale.

**TERMİNATOR™**

The Paraclipse Terminator is a portable appliance for commercial and industrial applications. The Terminator’s ingenious design utilizes two lamps and reflectors to attract flies to both sides of the unit. It can be used free-standing or suspended from the ceiling. A wall-mounted model is also available, which treats up to 5,000 sq. ft.

The Terminator’s high-volume, 60-day cartridge system traps many more times flies than glueboard units.

**FLY PATROL™**

The Fly Patrol is a remarkably versatile decorative fly control system. Beautifully designed, it is powerful enough for commercial use in areas up to 1,000 square feet. The unique design allows the Fly Patrol unit to be wall mounted or placed on a flat surface. Like all Paraclipse units, it uses special UV light, attractants and decoys on the trapping surface to lure and capture flies.

Disposal of the terminator cartridge is safe and sanitary. The terminator is also effective at attracting and capturing midges and other irritating pests. Disposal of the cartridge is safe and sanitary.

**MOSQUITO ELIMINATOR™**

The Paraclipse Mosquito Eliminator lets you take back your outdoor spaces. This decorative system is designed for installation outdoors, combining a proprietary ultraviolet-blacklight technology with special attractants to lure mosquitoes. Used free-standing or wall mounted, the Mosquito Eliminator is a powerful, effective and environmentally safe way to control disease-carrying mosquitoes.

The patented auto-advance cartridge lasts 30 days and can capture thousands of mosquitoes! The Mosquito Eliminator is also effective at attracting and capturing midges and other irritating pests. Disposal of the cartridge is safe and sanitary.

The Mosquito Eliminator ends the noise and unsanitary scattering of insect parts from bug zappers and avoids hazards from toxic chemical pesticides.
